

Glovalth Health Tech Care Ltd

Job Description – Glovalth Health Tech Care Ltd

Job title: Data engineer Internship.

Location: Hybrid/ Weekly once onsite to the office, St George's House, 6 StGeorge's Way, Leicester LE1 1QZ

Terms:12 Months Internship

Stipend: 15900 per annum

Requirements: Ability to work in a collaborative environment; occasional flexibility may be required.

About us:

Glovalth Group is currently developing a specialized HR-driven timesheet application designed for the healthcare sector. This solution goes beyond conventional timesheet systems by incorporating both medical and non-medical care activities, making it suitable for a wide range of healthcare settings, including residential homes, care homes, hospitals, and clinics.

About the role:

As a Data Engineer Intern at Glovalth Health Tech Care Ltd, the role will work under the guidance of assigned mentor to support the design, development, and optimization of data systems, AI tools, pipelines. In this role, the intern will assist in building scalable data solutions, ensuring data quality, and contributing to the efficient flow of information

across the organization. The intern will gain hands-on experience with data engineering tools and best practices while collaborating with cross-functional teams to support data-driven decision-making.

Glovalth Health Tech Care Ltd

Roles and responsibilities,

- Contributed to the development, maintenance, and optimisation of data pipelines supporting healthcare applications and digital solutions at Glovalth Health Tech Care Ltd.
- Assisted in executing ETL processes to consolidate data from multiple healthcare systems into structured formats for analysis and reporting.
- Worked closely with the data team to uphold high standards of data quality, accuracy, and consistency across platforms.
- Supported the design and implementation of database schemas and data models aligned with healthcare operations, including workforce management and patient care systems.
- Organised and maintained both structured and unstructured data for healthcare applications such as scheduling, timesheets, and care planning tools.
- Participated in testing and validating data pipelines pipe lines and workflows to ensure reliability, scalability, and optimal performance.
- Detected, documented, and escalated data anomalies to senior engineers to support ongoing system improvements.
- Assisted in preparing and cleaning datasets for machine learning model development and evaluation.
- Contributed to the development and testing of AI-driven solutions for data analysis, predictive modelling, and automation within healthcare systems.
- Applied best practices in data engineering, data warehousing, and cloud-based technologies in a healthcare-focused environment.
- Collaborated with senior data engineers, analysts, and project managers to gain practical experience in building scalable data solutions that enhance healthcare efficiency and operations.
